

About RLTSOURCE, LLC

We at RLTSOURCE set out to pursue a lifestyle of balance and health for our family. We searched for natural products with the best ingredients that would contribute to our own health and well-being. As an overflow of our discoveries, we are now offering this to others who would also benefit from our research and experience. We have found excellent skincare products that we ourselves use and can personally testify to their quality and effectiveness. We maintain a commitment to products that not only have cosmetic benefits, but also contribute to our overall health. As such, we only offer paraben-free products in the Bethesda Springs Botanicals line.

We offer Solutions with Integrity to meet legitimate needs with outstanding service and personal attention.

- **Bethesda:** from the 5th chapter of the Book of John was a place of healing.
- **Springs:** refer to the source
- **Botanicals:** are products extracted from plant life

Symwhite Lightening Serum: A highly effective, patent pending skin lightener and “most potent tyrosinase inhibitor ever reported”. No hydroquinone. Can be used as a spot eraser. Apply serum to clean face twice daily, and you will start to see results within 4 weeks.

- (1) **Acetyl Glucosamine (D):** N-Acetyl glucosamine is an amino-monosaccharide that was developed as a pigment-lightening cosmetic. It decreases melanin production by inhibiting tyrosinase glycosylation. A randomized double-blind study reported that the application of 2% N -acetyl glucosamine twice daily for 5 weeks provided a lightening effect.
- (2) **SymWhite (Phenylethyl Resorcinol):** Skin lightener and antioxidant, potent levels of tyrosinase inhibition
- (3) **Tricholoma Matsutake (Songyi) Extract:** Natural skin lightener, skin smoothing polysaccharides, antioxidant, moisturizing, UV filter/absorber.
- (4) **Extract of brown algae:** Formulated to reduce pigment of synthesized melanin, exfoliate, and provides anti-free radical protection. After 28 days, 90% found their skin whiter and 70% found their skin to be clearer and more luminous. Algowhite acts on the 4 key stages of the skin pigmentation process with a skin lightening and depigmentation action: it inhibits melanin synthesis, inhibits melanin pigmentation; activates the melanin elimination process by stimulating cellular renewal and finally stimulates natural skin exfoliation to accentuate the luminosity and consistency of the complexion

- (5) **Glycyrrhetic Acid:** Active principle of licorice, anti-inflammatory, anti-bacterial, inhibits intercellular gap-junctional communication that encourages melanin synthesis
- (6) **Emulica:** Super fruit with potent antioxidant properties that help prevent oxidative stress, MMP inhibitor, promotes production of pro-collagen, melanin inhibitor, UV protection

TONING ASSAY - EPIDERMAL MODELS

- MelanoDerm™ MEL-300-B models (skin type IV)
- Photometric quantification of melanin (400 nm)
